

# COUNTERPLATE

www.essentialpro.net | 800-331-8811

Made to machine easily and produce smooth skived edges and sharp channels for perfect creases every time.

## Essential Products CounterPlate

### TECHNICAL INFORMATION

#### General Properties:

- Phenolic resin counter-plate
- Thickness tolerance +/- .0015"
- Available in various thicknesses ranging from .016" to .54"
- Plate dimensions 42 x 42"

The Essential Products CounterPlate is created using a high thread count of tightly woven fiberglass sheeting on both faces assuring a tight thickness tolerance across the smooth CounterPlate surface. The high thread count allows for added strength and a thickness tolerance less than that of a strand of hair. The smooth surface of the EP CounterPlate requires a thin film of adhesive to confidently lock the entire surface of the counter plate onto the cutting plate for the entire production run. Made to machine easily and produce smooth skived edges and sharp channels for perfect creases every time.
