The No-Steel needed flat top blanking board.

DuraBlanker

TECHNICAL INFORMATION

General Properties:

- Reinforced Rayform to withstand blanking forces.
- Completely bonded on all surfaces for maximum strength.
- Cuts perfectly on existing routing systems.
- Weighs less than a typical wood/steel combo.

DuraBlanker was developed to be an alternative to the standard Wood/Steel combo for flat top blankers. It is easily cut on a router system with a 3/16" bit in two passes. Because the faces are bonded across the entire surface and not just where it is drilled and screwed as with the typical Wood/Steel combo, in many cases it can be considered the stronger of the two options. It can save you time and money as well; no need to drill and screw a separately cut steel plate to a wood board.

The Essential Products DuraBlanker board is available in 5/8 x 46 x 70" dimension.
