

# EXACT BOARD

PATENT PENDING

www.essentialpro.net | 800-331-8811

Innovative technology offers long lasting dieboard performance with greater tolerance stability.

## Exact Board

### TECHNICAL INFORMATION

#### General Properties:

- Innovative coating technology allows for greater stability and use.
- Maintains tolerance for steel plate tooling.
- Available in a variety of colors and sizes.

Manufactured using premium hand-picked Birch boards and a proprietary coating process, the Exact Board is the ideal product for jobs requiring a stable board for use with milled steel cutting plates.

The coating is applied without a liquid carrier and is then fused to the wood fibers of the board. This process does not introduce any additional moisture to the board which can affect the tight tolerances required when used in matched tooling. The coating also seals both faces and the four edges, creating a protective guard against environmental humidity changes which can cause movement in the board and warp.

#### rotary boards

- Rayform Rotary
- TruLine Rotary
- Exact Rotary
- Maple Rotary
- Beech Rotary

#### flat boards

- Rayform DuraCore
- Rayform PolyCore
- Rayform DuraPly
- Exact Board
- Premium Maple
- Standard Maple
- Premium Euro Birch
- Premium Coated Euro Birch
