

RAYFORM PRODUCT LINE

www.essentialpro.net | 800-331-8811

The ultimate die base material used world wide for the most demanding diecutting applications.

DURACORE

Extremely strong, flat and stable dieboards made from high strength thermoset resins that can be reknifed many times. Heat and moisture have very little effect on DuraCore. Ideal die applications would be high precision, long-running, thermal or multiple up dies matching to Steel Counters.

POLYCORE

This Rayform/Birch hybrid shares many of the characteristics of DuraCore except it is lighter in weight. The combination of the strength of the Rayform and the resilience of the Birch also makes it a good option for blanking and stripping applications.

DURAPLY

This is the most economical version of a Rayform board that has become the standard for matched tooling sets with Steel Counters where the job is a long runner that will be stored and rerun multiple times.

KLEAN KERF

This version allows for the router systems used for making dies to be able to create a DuraPly tool. Rayform is on just one face of the 5/16" board. After routing, glue the two wood faces together and it yields a perfect 5/8" DuraPly board.
